Mihail Stîngaci

Backend Developer, Node.js & Symfony — TypeScript · Real-Time · Event-Driven Microservices

Email stmihai84@gmail.com **Web** stmihai84.github.io **LinkedIn** linkedin.com/in/mihai-stingaci-dev
Location Chișinău, Moldova **Languages** RO · FR · RU · EN

PROFILE

Backend developer with six years of commercial experience, currently building microservices for a business-communications platform. On the Node.js / TypeScript side: the Socket.IO real-time server that consumes RabbitMQ events, and standalone Express APIs — AI voice agents, transcription — with JWT auth, MongoDB / MySQL, OpenAPI docs, tests and Docker deployment. On the Symfony side: the chat service, designed and delivered end to end. Comfortable from schema design and broker topology through to deployment. Earlier background in payment processing. Four working languages.

EXPERIENCE

Backend Developer, Node.js / Symfony — NIXAP Development SRL

2024 — present

Vylo — business-communications platform

Dec 2025 — present

VoIP, SMS, team chat, video conferencing, call-centre CRM.

- **Real-time server in Node.js / TypeScript** — Socket.IO consumes RabbitMQ events (amqplib) and broadcasts them to rooms; JWT socket authentication, presence tracking, and a Redis adapter spreading connections across instances.
- **AI voice-agents service** — Node.js 24, TypeScript, Express 5 and MongoDB (native driver, no ORM). Provisions agents on ElevenLabs and Deepgram, writing to the provider first so local records never drift; RS256 JWTs verified against the core API's public key, Swagger / OpenAPI docs, tests on node:test against a throwaway Mongo, and a Docker start-up that refuses incomplete configuration.
- **Transcription API** — Node.js / Express: JWT-protected CRUD for summary instructions, on MySQL with migrations.
- **Electron desktop client** — Node.js main process: auto-update (electron-updater), checked at launch and daily at 08:00, with status exposed to the React UI over IPC.
- **Built the chat service from an empty repository** — Symfony 7.4 / API Platform on MongoDB, Elasticsearch full-text search, S3-compatible attachments; it publishes to RabbitMQ the events the Node.js server broadcasts.
- Other Symfony microservices: task management (deny-by-default permissions), contacts (extracted from the monolith, bounded by identifiers), real-time notifications; contributions to the core API (Stripe subscriptions, telephony) and a PostGIS geolocation service.

Node.js · TypeScript · Express · Socket.IO · RabbitMQ · MongoDB · Redis · JWT · OpenAPI · Electron · Symfony 7.4 · API Platform · PHP 8.4 · Elasticsearch · MinIO / S3 · Docker

Ride-hailing platform

2024 — 2025

Application for the Romanian market.

- Maintained and extended the platform across backend and frontend.
- Designed database structures and authored migrations for an evolving production schema.
- Shipped driver–passenger blocking, in-app messaging, real-time updates and multilingual interface support; built custom Vue.js components for in-app data visualisation.

Symfony · Laravel · Vue.js · MySQL · Redis · Docker

PHP / Full-Stack Developer — ServiciiComplete

2022 — 2024

- Designed and implemented user registration and account flows.
- Modelled and managed order, transaction and delivery data in MySQL.
- Led a bespoke WordPress project from client requirements through to launch.

PHP · JavaScript · MySQL · WordPress

PHP Developer — TribePayments

2020 — 2022

- Developed and maintained payment-processing systems.
- Integrated third-party payment-gateway APIs.
- Worked with cross-functional teams on secure, scalable delivery.

PHP | JavaScript | Payment gateways | WordPress

Symfony Developer — Generation Internet, France

2019 — 2020

- Built a time-tracking application for client projects: clients purchased development hours, developers logged usage against them for feature work and bug fixing.
- Earlier project work for OK Flora — internal administrative sites, user and transaction management.

Symfony | Sonata Admin | MySQL

> **France — Hospitality industry** 2006 — 2019
>
> Worked full-time in hotels in France while saving to finance a return to software development. Retrained in 2019 through an intensive, state-funded programme and re-entered the field as a developer. Source of fluent French.

TECHNICAL SKILLS

Languages	TypeScript · JavaScript · PHP 8.4 · SQL
Node.js	Node.js 24 · Express 5 · Socket.IO · amqplib · ioredis · MongoDB driver · mysql2 · node:test · Swagger / OpenAPI · ESLint
PHP	Symfony 7 / 8 · API Platform · Laravel
Architecture	REST APIs · Microservices · JWT / RS256 · OOP & SOLID
Data & search	MongoDB · MySQL / MariaDB · PostgreSQL + PostGIS · Elasticsearch · Redis
Messaging	RabbitMQ · Socket.IO · WebSockets · Event-driven architecture
Frontend	Vue.js · React · Electron · HTML · CSS · Responsive design
Infrastructure	Docker & Compose · Git · MinIO / S3
Integrations	Stripe · ElevenLabs · Deepgram · OpenAI · SIP / WebRTC · Jitsi
CMS	WordPress · Elementor · Polylang

EDUCATION

Cefim, France

2022

Web Development.

EnyEcolinformatique, France

2019 — 2020

Web and Mobile Web Development — OOP, algorithms, software engineering. Intensive state-funded retraining programme.

Technical University of Moldova

2002 — 2006

Faculty of Informatics and Foreign Languages.

LANGUAGES

Romanian	Native
French	Fluent — 13 years living and working in France
Russian	Proficient
English	Professional, technical
